LunarShadow Designs 

The Volta Cingulata, or voltaic armadillo to use its common name, was the first creation of Dr Ikena Ahoudi, a renowned geneticist within the mad science community. By

successfully integrating segments of the electric eel genome he was able to demonstrate the viability of his unique non-Euclidian integrase system years before conventional science began sequencing the

genomes of higher organisms.

The creature was originally marketed to special ops teams as a biological intrusion system, capable of burrowing in below installations before frying the security networks. A job at which it failed spectacularly. Prone to distractions or just wandering off its now more commonly found as an eccentric collectors item and occasionally as a guard animal in sites that eschew electronic based security measures.

To this day we still don't know how it acquired those \$*&@ing kangaroo sequences.
